

Guests tap, order, split — and **pay by debit** from their phone.

Tavora turns every table into its own ordering point. Guests tap a tag on the table — or scan a QR — and order, split the bill, and pay right from their phone. **No app to download, no account, no waiting for the terminal.** It runs beside your existing POS, or with no POS at all.

PAY BY DEBIT — THAT'S THE POINT

- ▶ **Interac debit at your terminal, today** — guests pay the way Canadians actually pay; your server confirms it in Tavora. No new hardware.
- ▶ **Cards & wallets in the phone** — secure Stripe hosted checkout on **your own** Stripe account. You stay the merchant of record; money lands in your account, not ours.
- ▶ **Interac right inside the phone** — via Moneris KONEK **COMING WITH MONERIS ENABLEMENT** — in final setup with Moneris now; we won't call it live until it is.
- ▶ **Built so a payment can't go wrong** — if a guest's phone sleeps, reloads, or loses signal mid-payment, the tab is never lost and never charged twice.

WHAT GUESTS DO

- ▶ **Tap or scan** — the full menu opens on their phone
- ▶ **Group tabs** — everyone at the table orders into one tab
- ▶ **Split that actually adds up** — each guest claims their items; shares sum to the bill exactly, to the cent
- ▶ **Allergy flags** travel with the order to the kitchen

HOW IT WORKS

- 1 We set it up in person, anywhere in the Lower Mainland**
Your menu built in, tap points at your tables (printed QR to start — free; NFC table tags added when your pilot is signed), your BC taxes configured.
- 2 Guests order and pay from their phones**
Orders fire straight to the kitchen display — Fired · Ready · Served — and your staff floor board.
- 3 You see the whole room, live**
Owner dashboard with real figures only: today's tabs, revenue by payment type, open tables, kitchen queue.

NO POS? NO PROBLEM.

- ▶ **POS-optional by design** — Tavora's kitchen display and boards are the system of record
- ▶ **Nothing to rip out** — keep your terminal, keep your setup
- ▶ **Live today** — the product is built, verified end-to-end, and running now — try the demo card on your counter

PILOT PRICING — FIRST 3 RESTAURANTS,
RATE LOCKED 12 MONTHS

\$1,000 setup · \$300/mo per location

Includes in-person setup anywhere in the Lower Mainland, menu build, tap points, staff and kitchen boards, owner dashboard, team training, and tuning to your floor. Cancel anytime after the pilot month.

Coming next — AI Table Watch (Phase 2 pilot): a camera module that reads table states from snapshots — never video, no faces, frames deleted seconds after they're read — and pings staff before a guest has to wave someone down. Pilot tables only, under a signed privacy addendum. Ask us about the pilot list.

Try it on your own phone — the demo card on the counter is live. Then let's talk pilot.
